

What Is DOGMI (DOGMI)?

DOGMI is the first dog meme coin on the Internet Computer. It stands for Dogs GMI!

A high-supply, deflationary dog meme-coin with a canister that shall be immutable, black-holed, and tamper-proof. Launched in September 2022, DOGMI was originally under the EXT standard. It has since evolved to the ICRC-1 standard. Every transaction burns 1 DOGMI.

Mission & Vision

DOGMI vision is to be the leading Dog IC-native meme coin, as recognizable as Shiba Inu (SHIB) on Ethereum. The token design shall be of a high-supply, deflationary dog meme-coin with a canister that is immutable, black-holed and tamper proof.

DOGMI's mission is to empower and unite the ICP community by integrating the camaraderie of the dog meme community and digital currency on the Internet Computer platform. DOGMI aspires to lead the way in the IC demonstrating the potential of meme coins as both a cultural and financial asset.

How Many DOGMI Coins Are There in Circulation?

\$DOGMI currently has a maximum supply of 269.4 trillion tokens, which decreases as new tokens are burned. The ICRC-1 canister was launched with a 420.69 trillion tokens, of which 151.27 trillion have been burned. Every transaction burns 1 DOGMI.

From the original supply distribution, 3% was allocated to the team, 10% to the initial liquidity and the rest was airdropped to the community, distributed via growth and marketing campaigns, and added further to provide liquidity.

Who Are the Founders of DOGMI?

DOGMI was born from the DogFinity movement - a movement for ICP that created an OG community to grow the Internet Computer ecosystem.

Where Can I Buy DOGMI?

DOGMI is currently available for trading on ICP decentralized exchanges.

[Sonic](<https://coinmarketcap.com/exchanges/sonic/>).

[ICPSwap](<https://www.icpswap.com/>).

Growth Strategy

Here is how we envision the future success of DOGMI:

- a. Ensure the canister follows the most up-to-date standard required for a meme token:
 - i. Options:
 1. Future SNS launch issuing a new token to allow seamless upgrades to ICRC extensions, in a safe and decentralized manner.
 2. Launching a new token ICRC2 compliant and with a ledger.
- b. Increasing liquidity on LPs
 - i. Options:
 1. Future SNS launch raising funds to increase liquidity and distribute it across leading ICP dexes (e.g. SONIC, ICPSwap).
 2. Future LBP raising funds to increase liquidity and distribute it across leading ICP dexes (e.g. SONIC, ICPSwap).
- c. Brand and trust-building
 - i. Options:
 1. Active engagement across Web2 and IC social platforms, partnership with other projects, upgrades to its ecosystem (e.g. [ICLand tool](#)) and architecture.
- d. Black-hole the canister after it has been upgraded (possibly after the SNS)

- i. Make \$DOGMI high-supply, deflationary dog meme-coin with a canister that is immutable, black-holed and tamper proof
- e. Prepare it for widespread adoption (e.g CEX listings)
